- * subscription page in home when clicks, it goes to that page & show plans & details
- * choose plan & after clicking payment type it redirect to upi / card pages (2)
- * click pay it shows done & store in transaction page can be clicked from home.

Comments

1. First the notification the project title
2. If we forget the password and again we register the
user name and password just like add the form and
In category form remove gender
3. In form 2 add confirm password and set password
4. In form 3 add area, Address and Landmark
5. In Content changes form, if do book movies and
it show the seats, just add that one
6. If we book the ticket, and QR code generate that
must be add.
7. In subscription add the with package and many times
we have to mention. So plz reduce

[Review 2]:

- 1) for booking movie first theater selection should be done
- 2) location and area of particular theater should be added
- 3) Movie theater blueprint for selecting seats should be added.
- 4) for Confirmation of ticket QR code should be for unique ticket collection.
- 5) Contact us option should be included for clearing issues/queries
- 6) Categories like Action, Fun, Horror should be included to find faster.

admin ✓

The comments / ~~on~~ review imply about ticket booking but my topic is a streaming platform. i have made some noticeable changes.
